                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tyrosine phosphate.

SUBCELLULAR LOCATION: Type I membrane protein.

LALTERNATIVE PRODUCTS: 2 ISOFORMS; CAK I (SHOWN ARE PRODUCED BY ALTERNATIVE SPLICING. THEY ONLY ABSENCE OF A 37 RESIDUES SEGMENT.

TISSUE SPECIFICITY: THE PREDOMINANT ISOFORM CAK DEVELOPING EMBRYO AND ADULT BRAIN; CAK II IS EXECUTED IN CELLS.

SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                   European Bioinformatics Institute. J. Cell Biol. 109:3493-3501(1989).

-i- FUNCTION: THE EXTRACELLULAR MATRIX (ECM) OF VOLVOX CONTAINS INSOLUBLE FIBRCUS LAYERS THAT SURROUND INDIVIDUAL CELLS AT A DISTANCE TO FORM CONTIGUOUS CELLULAR COMPARTMENTS. SSG 185 IS MONOMERIC PRECURSOR OF THIS SUBSTRUCTURE (C3Z STRUCTURE). THE CONALENT CROSS-LINKS ARE FORMED BETWEEN THE SACCHARIDE CHAINS RATHER THAN BETWEEN THE POLYDEDTIDE CHAINS.

-i- PTM: A CENTRAL DOMAIN OF 77 AA CONSISTS ALMOST EXCLUSIVELY OF HYDROXYEROLINE RESIDUES.

-!- FUNCTION: BINDS TO THE FC REGION OF MONOMERIC IMMUNOGLOBULINS GAMMA. MEDIATES THE SELECTIVE UPTAKE OF IGG FROM MILK AND HELPS NEWBORN ANIMALS TO ACQUIRE PASSIVE IMMUNITY. IGG IN THE MILK IS BOUND AT THE APICAL SURFACE OF THE INTESTINAL EPITHELIUM. THE RESULTANT FORN-IGG COMPLEXES ARE TRANSCYTOSED ACROSS THE INTESTINAL EPITHELIUM AND IGG IS RELEASED FROM FCRN INTO BLOOD CONSIST OF TWO SUBUNITS: P51, AND P14 WHIGH SUBUNITS: FCRN COMPLEX CONSIST OF TWO SUBUNITS: P51, AND P14 WHIGH SUBUNITS: P51, AND P14 WH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or therapeutic molecule, respectively. The polypeptide is capable of binding the flt3 receptor and is: a) amino acids 28 x of murine flt3 ligand (flt3-L), where x is an amino acid between 163-231; b) amino acids 28-y of human flt3-L, where y is an amino acid between 160-235; and c) a polypeptide that has at least 90% identity to the polypeptides of either (a) or (b). The method ameliorates the effects of autoimmune diseases, food allergies or organ or tissue rejection following transplantation. Administration of flt3-L allows lower doses of antigens to be used in vivo for mucosally administered antigens. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A method has been developed of initiating or enhancing: (i) an antigen-
specific immune tolerance; or (ii) immunotolerance of a therapeutic
immunogenic molecule by addition of a polypeptide, before, after or with
the mucosal administration of an immunotolerising amount of the antigen
                                                                                                                                                                                                          myelodysplasia; aplastic anemia;
multiple myeloma; leukemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (this sequence) or mature (AAY69720) flt3-L polypeptides. The flt3-L protein binds cell surface tyrosine kinase receptors and regulate growth and differentiation of hematopoietic progenitor cells. The flt3-L protein can be used to induce cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mutant soluble flt3 ligand polypeptide used in cellular expansion, immune response stimulation or treatment of pathological condition contains amino acid substitutions at positions 8, 84, 118 or 122

The polynucleotides are incorporated into the cells of the vertebrate in vivo, and a prophylactically or therapeutically effective amount of Flt-3 ligand and 1 or more antigens or cytokines is produced in vivo. Pharmaceutical
                                                                                                                                                                                                                                              suppressing tumour growth in a mammal. The tumour is melanoma, glioma or lymphoma, particularly B-cell lymphoma. They can also be used for the prophylactic and/or therapeutic treatment of:
(a) bacterial (e.g. Bacillus infections), viral (e.g. hepatitis B and C in humans), parasitic (e.g. malaria) and fungal infections; (b) autoimmune diseases (e.g. rheumatoid arthritis and osteoarthritis); (c) cancer; and (d) Aujeszky's disease in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (Flt-3 ligand). The invention is directed to enhancing the immune response of a vertebrate to an antigen or a cytokine by administering in vivo, into a tissue of a vertebrate, a Flt-3 ligand-encoding polynucleotide, and I or more antigen or cytokine-encoding polynucleotides. The Flt-3 ligand-encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunogenic compositions comprising Flt-3 ligand encoding polynucleotide and one or more antigen, or cytokine encoding polynucleotides, useful for suppressing tumour growth and for treating
                                                                                                                             Sequence
                                                                                                                                                                                                                       Various other examples of these diseases are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               compositions comprising the polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of human Fms-like tyrosine kinase

                                                                                                                                                                                             CC The invention relates to treating an individual at risk for or suffering CC from infection with a pathogenic or opportunistic organism. The method CC involves administering a combination of two to five agents comprising: CC (a) dendritic cell mobilisation factor; (b) dendritic cell maturation CC agent; (c) dendritic cell activation agent; (d) T cell enhancing factor; CC or (e) activated, antigen-specific T cells. The methods are useful for CC treating an individual at risk for or suffering from infection with a CC (e.g. M. tuberculosis), yeast, fungi (e.g. Viruses (e.g. HIV), bacteria CC (e.g. M. tuberculosis), yeast, fungi (e.g. C. albicans) or protozoa (e.g. CC T. cruzi, which causes Chaga's disease). The methods are especially CC useful for treating an individual suffering from immunosuppression by CC enhancing a lymphocyte-mediated immune response. In particular, the CC method is useful for treating inflammations, chickenpox, oral or genital CC herpes, mononucleosis, multifocal leukoencephalopathy, hepatitis, AIDS, C T cell leukemia or T cell lymphoma. The activated antigen-presenting CC dendritic cells are useful as a vaccine adjuvant. The present sequence CC represents a human Filti. no lymphotypent of the present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 멂

ID AAR6
C A cDNA Library Irou Lie numes screened.

C pME185, was screened with an 800 bp fragment derived from mouse clone T118. This fragment encompasses the coding region conserved between two mouse clones, T118 and T110. Approx. 20 conserved between two mouse clones, T118 and T110. Approx. 20 conserved between two mouse clones, T118 and T110. Approx. 20 colones, S86 and S109, were found to be approx. 75% homologous to the mouse clones over the first 163 AAs. Clone S86 continued to show homology to T110 until the stop codon, although to a closes r degree, for an overall homology of 66%. Clones T118 and C1 lesser degree, for an overall homology of 66%. Clones T118 and C2 after mouse residue 163 (human residue 160). An additiona mouse clone designated M58 has a 29 AA insert at the junction between cc the common and divergent portions of the mouse ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19-MAY-1993;

Pharmaceutical compositions comprising the polynucleotides are useful for suppressing tumour growth in a mammal. The tumour is melanoma, glioma or lymphoma, particularly B-cell lymphoma. They can also be used for the prophylactic and/or therapeutic treatment of:

(a) bacterial (e.g. Bacillus infections), viral (e.g. hepatitis I and C in humans), parasitic (e.g. malaria) and fungal infections (b) autoimmune diseases (e.g. rheumatoid arthritis and various other examples of these diseases are given in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       colony stimulating factors or protein kinases. The protein can also modulate, augment or enhance a patient's immune response and can be used to treat an immune disorder (e.g. allergy, autoimmunity or immunosuppression). The protein may be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, small cell lung, testicular or ovarian cancer, lymphoma, multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              binds cell surface tyrosine kinase receptors and regulate growth and differentiation of hematopoletic progenitor cells. The flt3-L protein can be used to induce cellular expansion (especially in vivo) or differentiation, e.g. in hematopoletic, natural killer (NK) or dendritic cells, especially in the presence of growth factors such as interleukins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (AAY69719) or mature (AAY69720) flt3-L polypeptides. This sequence represents an example of the novel flt-3 ligands and comprises the L-3H mutant polypeptide. The flt3-L protein

                                                                                                                                                                              This sequence represents a rearranged human flt-3 receptor agonists of CC the invention. The agonists have a modified flt-3 ligand amino acid CC sequence. The agonists are used to stimulate production of haematopoietic CC cells in vivo (e.g. in a subject about to donate blood) or for ex vivo CC expansion for subsequent transplantation, e.g. to reconstitute bone CC marrow after chemotherapy, disease etc., or to treat haematological CC disease such as drug-induced myelosuppression, defects caused by CC infections, burns or renal dialysis. Optionally ex vivo expanded cells CC are transduced with a gene therapy vector for treating e.g. congenital CC metabolic diseases, immune deficiency, neurological disease, cancer and CC infections. The agonists can also be used in the treatment of tumours, CC infections and autoimmune disease, when administered optionally with an CC antigen. The agonist can also be used in the production of dendritic CC cells for use as an immunising adjuvant for treatment disorders including acquired immune deficiency syndrome. Compared with native ligands, the CC new agonists have better stimulatory activity, reduced side effects CC and/or better physical properties such as solubility, stability or refold CC efficiency. When used together with other stimulatory agents, the
                                                                          Matches

The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (AAY69719) or mature (this sequence) flt3-L colypeptides. The flt3-L protein binds cell surface tyrosine kinase creeptors and regulate growth and differentiation of hematopoietic progenitor cells. The flt3-L protein can be used to induce cellular cells expansion (especially in vivo) or differentiation, e.g. in cellular cells expansion (especially in vivo) or differentiation, e.g. in the cellular cells expecially in the cellular (NK) or dendritic cells, especially in the cellular cells or protein kinases. The protein can also modulate, augment or cellular (e.g. allergy, autoimmunity or immunosuppression). The protein cellular (e.g. allergy, autoimmunity or immunosuppression). The protein cellular (e.g. allergy, autoimmunity or immunosuppression). The protein cellular cellular or ovarian cancer, lymphoma, multiple myeloma, neuroblastoma or acute
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                 polypeptides. This sequence represents an example of the novel flt-3 ligands and comprises the K04E mutant polypeptide. The flt3-L protein binds cell surface tyrosine kinase receptors and regulate growth and differentiation of hematopoietic progenitor cells. The flt3-L protein can be used to induce cellular expansion (especially in vivo) or differentiation, e.g. in hematopoietic, natural killer (NK) or dendritic cells, especially in the presence of growth factors such as interleukins, colony stimulating factors or protein kinases. The protein can also modulate, augment or enhance a patient's immune response and can be used to treat an immune disorder (e.g. allergy, autoimmunity or immunosuppression). The protein may be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, mualcama aniarchiastoma or sorted leukomia.
                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (AAY69719) or mature (AAY69720) flt3-L the full length wild type (AAY69719) or mature (AAY69720)
                                                                                                                                                                                                                                           myeloma, neuroblastoma or acute leukemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mutant soluble flt3 ligand polypeptide used in cellular expansion, immune response stimulation or treatment of pathological conditions contains amino acid substitutions at positions 8, 84, 118 or 122 -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 4;

                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (AAY69719) or mature (AAY69720) flt3-L polypeptides. This sequence represents an example of the novel flt-3 ligands and comprises the Q122R mutant polypeptide. The flt3-L protein binds cell surface tyrosine kinase receptors and regulate growth and differentiation of hematopoietic progenitor cells. The flt3-L protein be used to induce cellular expansion (especially in vivo) or dendritic cells, especially in the presence of growth factors such as interleukins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunomodulator; immunosuppressive; cytostatic; antianemic; anti-HIV; neuroprotective; antiallergic; flt3 ligand; flt3-L; wild type; allergy; cell surface tyrosine kinase receptor; hematopoietic progenitor cell; cellular expansion; cellular differentiation; natural killer cell; cancer; dendritic cell; immune response; autoimmunity; immunosuppression; myelodysplasia; aplastic anemia; HIV infection; lymphoma; neuroblastoma; multiple myeloma; leukemia; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Вb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DЬ
                                                                              ligands and comprises the L26F mutant polypeptide. The flt3-L protein binds cell surface tyrosine kinase receptors and regulate growth and differentiation of hematopoletic progenitor cells. The flt3-L protein can be used to induce cellular expansion (especially in vivo) or differentiation, e.g. in hematopoletic, natural killer (NK) or dendritic cells, especially in the presence of growth factors such as interleukins, colony stimulating factors or protein kinases. The protein can also modulate agreement of the protein kinases.
                             modulate, augment or enhance a patient's immune response and can be to treat an immune disorder (e.g. allergy, autoimmunity or immunosuppression). The protein may be used to treat a pathological
                                                                                                                                                                                                                             The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (AAY69719) or mature (AAY69720) flt3-L
                                                                                                                                                                                                                                                                                                   Claim 13; Page 82-83;
                                                                                                                                                                                                                                                                                                                                     Mutant soluble flt3 ligand polypeptide used in cellular expansion, immune response stimulation or treatment of pathological condition contains amino acid substitutions at positions 8, 84, 118 or 122 \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer; dendritic cell; immune response; autoimmunity; immunosuppression;

The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides which exhibits increased or decreased biological activity relative to the full length wild type (AAY69719) or mature (AAY69720) flt3-L polypeptides. This sequence represents an example of the novel flt-3 ligands and comprises the L26F mutant polypeptide. The flt3-L protein binds cell surface tyrosine kinase receptors and regulate growth and differentiation of hematopoietic progenitor cells. The flt3-L protein car
                                                                                                                                  Mutant soluble flt3 ligand polypeptide used in cellular expansion, immune response stimulation or treatment of pathological conditions contains amino acid substitutions at positions 8, 84, 118 or 122 -
                                                                                                                     Claim 13;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel soluble flt3 ligand (flt3-L) polypeptides cc which exhibits increased or decreased biological activity relative to cc the full length wild type (AAY69719) or mature (AAY69720) flt3-L. Cc polypeptides. This sequence represents an example of the novel flt-3 cc ligands and comprises the H8Y mutant polypeptide. The flt3-L protein comprises to induce expansion (especially in vivo) or dendritic comprises to induce cellular expansion (especially in vivo) or dendritic confirmation, e.g. in hematopoietic, natural killer (NK) or dendritic colls, especially in the presence of growth factors such as interleukins, cc colony stimulating factors or protein kinases. The protein can also condulate, augment or enhance a patient's immune response and can be used to treat an immune disorder (e.g. allergy, autoimmunity or condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, complete the protein may be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, complete condition to the protein can be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, condition to the protein can be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, condition to the protein can be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, condition to the protein can be used to treat a pathological condition e.g. myelodysplasia, aplastic anemia, HIV infection, breast, condition to the protein can be used to treat a pathological condition to the protein can be used to treat a pathological condition to the protein can be used to treat a pathological condition to the protein can be used to treat a pathological condition to the protein can be used to treat a pat

GENERAL INFORMATION:
APPLICANT: Lyman, Stewart D.
Beckmann, M. Patricia
TITLE OF INVENTION: Ligands for flt3/flk-2 Receptors
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSE: Stephen L. Malaska, Immunex Corporation
STREET: 51 University Street
CITY: Seattle
STATE: Washington
COUNTRY: US
ZIP: 98101
COMPUTER READABLE FORM:
MEDIUM TYPE: FLOPPY disk
COMPUTER: Apple Macintosh
OPERATING SYSTEM: Macintosh
OPERATING SYSTEM: Macintosh
OPERATING SYSTEM: Macintosh
OPERATING SYSTEM: MSCONDOWN #5.1
APPLICATION NUMBER: US/10/095,449
FILING DATE: 13-Mar-2002
CLASSIFICATION NUMBER: US/10/95,449
FILING DATE: 13-Mar-2002
CLASSIFICATION NUMBER: US/869,692
FILING DATE: 13-Mar-2002
APPLICATION NUMBER: US/8616,407
